

# TECH CO-FOUNDER

## CTO / Technical Co-Founder wanted

Berlin · Remote Start possible · Equal Equity

### What we're building

Lenzy is the first vertically integrated platform for construction sites. End-to-end task completion for on-site construction.

Built for glove use, bad connectivity and "just-make-it-work" users. Every minute at the device is one less minute for real work on the construction site.

We break the limits of what's possible in usability and speed: Smart few-click reporting, easy legal compliance, AI speech-to-text.

### Mission

*Best on-site tool. Gold standard on every construction site.*

### Traction & Context

- Started April 2025 · Bootstrapped, no investment
- Clickable prototype ready
- 5 potential test companies lined up

### Engineering Challenge

You'll build the platform from ground up:

- Robust offline architecture for on-site features
- iOS App + PWA Web-App
- Scale & reliability for thousands of parallel construction sites

### Your Profile

- 4+ years software engineering experience
- Built and shipped real products (not just prototypes)
- Strong technical judgment: pragmatic, structured, quality-focused
- Agentic / LLM development (or strong curiosity + ability to learn fast)
- Entrepreneurial mindset: you move without being asked, communicate early, and own outcomes
- Bonus: B2B SaaS or iOS experience

### What We Offer

- Equal equity (real shares + voting rights, not token options)
- Vesting: 6 month cliff, 4 years vesting
- Co-founder level impact: shape product, team, and architecture
- Remote flexibility · Salary from first customers
- A-player culture: High bar, low politics, high ownership

### The Team · Berlin

**Benno (36)** CEO · Architect · 4y top firm · 5y construction startup  
**Mario (33)** CPO · Ex-founder · Business Analyst energy sector
