

Founding API & Integrations Engineer — Cofounder Track

AxisPad builds and operates rooftop landing pads on apartments and offices and completes the last 50-foot delivery. We connect drone operators, retailers, and properties through infrastructure and APIs to make drone delivery practical at scale.

Role

Design and build AxisPad's backend APIs and external integrations. Create secure endpoints, webhooks, and data flows that link drone operators, retailers, and property systems. Ship reliable services and clear docs partners can adopt quickly.

Responsibilities

- Design and operate REST/GraphQL APIs with auth, rate limits, logging, and observability
- Build webhooks and partner-facing SDKs; manage sandboxes and versioning
- Model data, write SQL, and run migrations in Postgres; ensure reliability and uptime
- Stand up CI/CD, infrastructure-as-code, and zero-downtime deploys on AWS or GCP
- Write crisp API docs and tests; support partners during integration and incident response

Must-Haves

- Backend API build and operations in Node/TypeScript or Python
- Auth fundamentals (JWT/OAuth), input validation, structured logging
- SQL and schema design with Postgres

- Hands-on experience with webhooks and third-party integrations
- CI/CD and cloud deployment on AWS or GCP
- Clear API documentation and meaningful test coverage

Strong Plus

- Go, GraphQL, and event queues (SQS/Kafka)
- Rate limiting and an observability stack (metrics, tracing, alerts)
- Real-time messaging, IoT/edge, GIS/maps
- Experience with aviation or drone APIs

Cofounder Track

This is a founding role. We are hiring a cofounder for this position. Title: Co■Founder, Head of Platform (or CTO). Substantial equity.
